[mex214] Hello Earth again

When a spaceship (frame S') passes Earth (frame S) at relative velocity $v = 0.6c$ (event 1), clocks are synchronized: $t_1 = t'_1 = 0$. At time $t_2 = 10$min a light pulse is emitted from Earth toward the spaceship (event 2). At time t'_3 the light pulse is detected on the spaceship (event 3).

(a) Draw a Minkowski diagram with axes (x, t) and (x', t') to scale on graph paper (with time measured in minutes and distance in light-minutes). Then locate the events 1, 2, 3 in the diagram.

(b) Determine the coordinates of all three event in both frames by graphical construction. compare the results with those found in [mex207].

Solution:
